Contents

Preface vii

Contributors ix

Acknowledgments xi

Chapter 1 Introduction 1
References 4

Chapter 2 Domain Geometry and Process Models 5
2.1 Problem Formulation 6
2.2 Case Complexity 6
2.3 Adequacy of Two-Dimensional versus Three-Dimensional Modeling Approaches 7
2.4 Consideration of Coordinate Systems 7
2.5 Computational Fluid Dynamics Software Selection 8
2.6 Timescales 8
2.7 Domain Geometry 8
2.8 Scale of the Problem 9
2.9 Process Models 9
2.9.1 Physical Process Models 9
2.9.2 Biological Process Models 10
2.9.3 Chemical Process Models 11
References 11

Chapter 3 Meshing 13
3.1 Mesh Types 13
3.2 Characteristics of a Good-Quality Mesh 13
3.3 Mesh Size 16
3.4 Meshing Strategy 16
References 18

Chapter 4 Initial and Boundary Conditions 19
4.1 General Considerations 19
4.2 Defining Turbulence Closure Conditions at Boundaries 23
4.3 Cell Zone Conditions 23
References 24

Chapter 5 Numerical Methods 25
5.1 Discretization of Equations 25
5.2 Coupled versus Segregated Solver 26
5.3 Controlling the Rate of Convergence and Stability 27
5.3.1 Underrelaxation Factors 27
5.3.2 Solution Initialization 28
5.3.3 Time-Dependent Solutions 28
5.4 Choice of Numerical Scheme 29
References 31

Chapter 6 Choosing Turbulence Schemes 33
6.1 Turbulent-Resolving Strategies 33
6.1.1 Direct Numerical Simulation 33
6.1.2 Large-Eddy Simulation 33
6.1.3 Reynolds-Averaged Navier–Stokes 34
6.2 Reynolds-Averaged Navier–Stokes Closure Models 34
Reference 35

Chapter 7 Grid Independence Tests 37
7.1 How to Test for Sufficient Grid Resolution 37
7.2 Case Study 38
References 40

Chapter 8 Model Verification, Calibration, and Validation 41
8.1 Sources of Uncertainty in Engineering Computational Fluid Dynamics Simulations 42
8.2 Verification 45
8.3 Calibration 45
8.4 Validation 46
References 46

Chapter 9 Documentation and Reporting 49

Chapter 10 Quality Control 51
10.1 Quality Control Procedures 51
10.2 Why Quality Control Is Important 52

Chapter 11 Conclusions 53

Index 55
