Volume 12857

Proceedings of SPIE, 1605-7422, V. 12857

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Computational Optical Imaging and Artificial Intelligence in Biomedical Sciences*, edited by Liang Gao, Guoan Zheng, Seung Ah Lee, Proc. of SPIE 12857, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

COMPRESSIVE IMAGING

12857 02 **Coded optical streaking for ultrahigh-speed imaging (Invited Paper)** [12857-7]

NOVEL IMAGING AND ML TECHNIQUES

12857 03 **Computational neuromorphic imaging: principles and applications (Invited Paper)** [12857-10]

12857 04 **Improving the performance and convergence speed of photo magnetic imaging reconstruction algorithm using convolutional neural networks** [12857-12]

IMAGING THROUGH COMPLEX MEDIA

12857 05 **Brain-inspired optical imaging: a neuromorphic computing approach for image reconstruction of dynamic targets obscured by dense turbid media** [12857-17]

12857 06 **Efficient reference-less transmission matrix retrieval for DMD amplitude modulation** [12857-18]

IMAGING SYSTEMS AND ALGORITHMS

12857 07 **Leveraging uncertainty quantification in adaptive multiphoton microscopy acquisition** [12857-27]

OPTICAL COMPUTING

12857 08 **Wavefront randomization improves deconvolution** [12857-31]

NOVEL MICROSCOPY TECHNIQUES II

12857 09 **AI Raman spectroscopy through machine learning** [12857-47]

MONDAY POSTER SESSION

- 12857 0A **Multi-modal imaging of tooth microcrack** [12857-50]
- 12857 0C **Addressing healthcare needs of the elderly in contactless blood oxygen saturation estimation with rPPG** [12857-55]
- 12857 0D **Development and evaluation of a deep learning model for oral soft and hard tissue diagnosis using synthetic image data generated by StyleGAN** [12857-56]
- 12857 0E **Single-shot digital holography with improved twin-image noise suppression using a diffusion-based generative model** [12857-57]
- 12857 0F **Monitoring the progress of subconjunctival hemorrhage through spectral reconstruction from RGB images** [12857-58]
- 12857 0H **Neuron tracking in *C. elegans* through automated anchor neuron localization and segmentation** [12857-68]
- 12857 0I **Correlative extreme ultraviolet, visible, infrared, and fluorescence microscopy in a single lensless imaging setup** [12857-70]
- 12857 0J **Predicting gene families from human DNA sequences using machine learning: a logistic regression approach** [12857-71]
- 12857 0K **Slice to volume registration using neural networks for serial optical coherence tomography of whole mouse brains** [12857-72]
- 12857 0L **Scattering suppression of transillumination images using deep learning for 3D reconstruction of light absorbing structures in turbid medium** [12857-78]
- 12857 0M **White blood cells segmentation and classification using a random forest and residual networks implementation** [12857-80]
- 12857 0N **Dual-encoder deep learning networks to enhance diffuse optical imaging for highly scattered nonhomogeneous media** [12857-81]
- 12857 0O **Deep transfer learning for DOI domain transformation** [12857-82]
- 12857 0P **Hardware-in-the-loop training for lensless imaging with a programmable mask** [12857-83]

DIGITAL POSTER SESSION

- 12857 0Q **Efficient elimination of undesired fringes in quantitative phase measurements** [12857-26]
- 12857 0R **Deep learning-based patient in-position detection for acupuncture treatment** [12857-85]
