SPIE

Volume 12876

Proceedings of SPIE 0277-786X, V. 12876

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Laser 3D Manufacturing XI*, edited by Bo Gu, Hongqiang Chen, Proc. of SPIE 12876, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

3D PRINTING I: JOINT SESSION WITH CONFERENCES 12876 AND 12898

- 12876 02 **Beam-shaping enhanced two-photon polymerization: towards 3D medical printing (Invited Paper)** [12876-1]
- 12876 03 **Advancing 3D-bioprinting with photopolymerization of orderly extruded multimaterials (POEM)** [12876-2]
- 12876 04 **Two-photon polymerization with a 780 nm monolithic diode laser** [12876-3]

POWDER-BED SLM METAL PRINTING I

- 12876 05 **Unveiling the potential of multimaterial laser-based powder bed fusion processes: a novel approach for enhancing design freedom in multimaterial additive manufacturing (Invited Paper)** [12876-14]
- 12876 06 **Comparing the heating homogeneity of bi-metal plate at action of laser pulses with single wavelength and with dual-wavelengths** [12876-15]
- 12876 07 **Combining high-throughput imaging in visible and SWIR wavelengths for in-situ porosity prediction in laser powder bed fusion** [12876-17]

POWDER-BED SLM METAL PRINTING II

- 12876 08 **Fabrication of metal-ceramic substrates by laser powder bed fusion using a high-power green laser and high temperature preheating** [12876-19]
- 12876 09 **Adjusting the microstructure of additively manufactured parts with tailored temperature fields by the combination of powder bed fusion with cw-laser and ablation with ultrashort laser pulses** [12876-21]

POWDER-BED SLM METAL PRINTING III

- 12876 0A **Line-scan, fiber-based confocal sensing for surface characterization and thermal distribution monitoring for selective laser melting system (Invited Paper)** [12876-22]

HYBRID, DED, AND MULTIMATERIAL PRINTING

- 12876 0B **A new processing concept as a visionary approach towards net-shaped DED-LB/M coatings (Invited Paper)** [12876-26]
- 12876 0C **Holistic view of additive manufacturing of blade integrated disks in the context of aerospace certification** [12876-27]
- 12876 0D **Exceeding the limits in laser materials processing by bridging additive and subtractive manufacturing with continuous wave and ultrashort pulsed lasers: manufacturing of parts with undercuts** [12876-28]
- 12876 0E **Optimization of mechanical properties of additive manufactured IN 718 parts combining LPBF and in-situ high-speed milling** [12876-29]
- 12876 0F **Multi-material printing from one solution by varying laser parameters** [12876-31]

FUNCTIONAL PHOTONIC DEVICES PRINTING I

- 12876 0G **Additively manufactured pressure sensor for embedding in 3D-printed below-knee orthosis (Invited Paper)** [12876-32]
- 12876 0H **Fused silica microstructured optical fibers made from 3D printed nanocomposite resin** [12876-33]
- 12876 0I **Fast vector wave optical simulation methods for application on 3D-printed micro optics** [12876-34]

FUNCTIONAL PHOTONIC DEVICES PRINTING II

- 12876 0J **CO₂ laser additive manufacturing of multilayer heterogeneous transparent films using TiO₂ and SiO₂ nanoparticles** [12876-37]
- 12876 0K **Towards pathogen detection with 3D-printed micro-optics in microfluidic systems** [12876-39]
- 12876 0L **A 3D-printed reflective lens fabricated via 2-photon polymerization for flexible catheter endoscopy** [12876-44]

POSTER SESSION

- 12876 0M **Additive manufacturing of Nickel-based superalloy: optimization of surface roughness using integrated high-speed milling** [12876-40]

- 12876 0N **Influence of zinc content variation of Cu-Zn alloy powder on film formation by the method of multibeam laser metal deposition using blue diode lasers [12876-41]**
- 12876 0O **Thermal cure monitoring of UV curing resin with PVDF sensor [12876-42]**
