Volume 12957

Proceedings of SPIE 0277-786X, V. 12957

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Advances in Patterning Materials and Processes XLI*, edited by Douglas Guerrero, Gilles R. Amblard, Proc. of SPIE 12957, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix *Conference Committee*

MATERIALS FOR HIGH NA EUV LITHOGRAPHY

- 12957 04 **Feasibility study of a positive tone organometal chemically amplified resist for high-resolution EUV single patterning** [12957-3]
- 12957 05 **Advanced processes in metal-oxide resists for high-NA EUV lithography** [12957-4]
- 12957 06 **Approach for enhancing sensitivity of tin-oxo cluster resist for high NA extreme UV lithography** [12957-5]
- 12957 07 **EUV metal oxide resists: impact of the environment composition on CD during post-exposure delay** [12957-6]

RESISTS FUNDAMENTALS

- 12957 08 **Substituent effects of acid generators on radiation-induced degradation and dissolution kinetics in chemically amplified resist process** [12957-7]
- 12957 09 **Controlling chemical segregation in EUV resists by varying viscosity and evaporation rate during the spin coating process** [12957-8]
- 12957 0A **Advanced EUV CAR small molecule compounds design and its impact to etch performance** [12957-9]
- 12957 0B **Understanding the stability of advanced inorganic-organic hybrid thin films for advanced resist applications** [12957-10]
- 12957 0D **Dissolution dynamics of copolymer of poly(4-hydroxystyrene-co-methacrylic acid) in tetraalkylammonium hydroxide aqueous solutions** [12957-12]

NOVEL PATTERNING MATERIALS

- 12957 0F **PFAS in semiconductor photolithography: a mass balance model (Keynote Paper)** [12957-14]
- 12957 0G **Positive-tone, dry-develop poly(aldehyde) photoresist** [12957-15]
- 12957 0H **Amorphous zinc-imidazolate all-dry resists** [12957-17]

12957 0I **Designing EUV negative tone resist and underlayer approaches exhibiting 14nm half-pitch resolution** [12957-80]

MATERIALS AND PROCESSES FOR VR/AR

12957 0J **Practical considerations for large-area nanoimprinted augmented reality waveguides** [12957-18]

12957 0L **Use of molecular design and synthesis to improve polymeric holographic photopolymer materials** [12957-20]

12957 0M **Nanoimprint lithography using novel optical materials for AR | MR devices** [12957-21]

NON CHEMICALLY AMPLIFIED RESISTS FOR EUV LITHOGRAPHY

12957 0O **Development of high contrast EUV photoresist for narrow pitch C/H patterning** [12957-22]

12957 0P **Main chain scission resists towards high-NA EUV lithography** [12957-23]

12957 0Q **Indium nitrate hydrate resist characteristics evaluated by low-energy electron beam exposure** [12957-24]

12957 0R **EUV lithography patterning using multi-trigger resist** [12957-25]

EUV LITHOGRAPHY PROCESS: JOINT SESSION WITH CONFERENCES 12953 AND 12957

12957 0U **Sub-20nm tip-to-tip enabled by anti-spacer patterning** [12957-28]

12957 0V **Patterning optimization for single mask bit-line-periphery and storage-node-landing-pad DRAM layers using 0.33NA EUV lithography at the resolution limit** [12957-29]

12957 0W **Recent progress of EUV CAR-NTD with new developer for chemical stochastic defect reduction** [12957-30]

PROCESS AND PATTERNING SCHEMES

12957 0X **Performance comparison of photosensitive polyimides for high-resolution dual-damascene schemes for FOWLP packaging applications** [12957-32]

12957 0Y **Development of wafer edge protection layer for advanced patterning process** [12957-33]

- 12957 0Z **Mitigation of EUV photoresist pattern deformation by wafer backside cleaning techniques**
[12957-34]
- 12957 10 **Organic dry development rinse (O-DDR) process for spin-on MOR to prevent pattern collapse**
[12957-35]

TOP COATS AND UNDERLAYERS

- 12957 12 **Functional underlayers, surface priming, and multilayer stacks to improve dose and adhesion of EUV photoresists** [12957-36]
- 12957 13 **Spin-on metal-oxide underlayer for EUV patterning** [12957-37]
- 12957 14 **Novel spin-on overcoat materials for EUV photoresist enhancement** [12957-38]
- 12957 15 **Lithography performance improvement of MOR by underlayers** [12957-39]
- 12957 16 **Enhancement of sensitivity and resolution by functional surface treatment process and primers (FSTP)** [12957-40]

SUSTAINABILITY: JOINT SESSION WITH CONFERENCES 12957 AND 12958

- 12957 17 **Machine, process, and material efforts towards sustainable lithography** [12957-41]
- 12957 18 **Non-PFAS biomass EUV resist for sustainable semiconductor manufacturing** [12957-42]
- 12957 19 **Biomass developer made from plants for lithography processes** [12957-43]

SIMULATIONS

- 12957 1B **Advanced simulations using an improved metal oxide photoresist model** [12957-45]
- 12957 1C **Acid generation efficiency prediction by bond cleavage calculation of EUV photoacid generators** [12957-46]
- 12957 1D **Principal components and optimal feature vectors of EUVL stochastic variability: applications of Karhunen-Loève expansion to efficient estimation of stochastic failure probabilities and stochastic metrics** [12957-47]

POSTER SESSION

- 12957 1G **Metal removal technology and pretreatment method of ion exchange resin** [12957-50]

- 12957 1H **PFAS-free I-line strong photoacid generator for positive-tone and negative-tone thick-film photoresists** [12957-51]
- 12957 1I **Study of acicular defects in the post-exposure bake process airborne molecular contamination** [12957-52]
- 12957 1J **An update on the improvement in optimization of point-of-use filtration of metal oxide photoresists** [12957-53]
- 12957 1K **Updated UPE filter design for point-of-use EUV CAR photoresist filtration for defect improvement** [12957-54]
- 12957 1L **Resist develop optimize to improve CDU and reduce process defect** [12957-55]
- 12957 1M **Advanced pattern selection and coverage check for computational lithography** [12957-56]
- 12957 1N **Negative tone i-line photoresist with controlled undercut profile designed for metal deposition to form metal interconnects** [12957-57]
- 12957 1O **Prediction of lithographic performance upon the adjustment of EUV photoresist components by advanced contrast curve analysis** [12957-58]
- 12957 1P **New PE filter for advanced photolithography process** [12957-59]
- 12957 1Q **Roughness improvement by post-development treatment of CAR for high-NA EUV lithography** [12957-60]
- 12957 1R **Metal infiltration into chemically amplified resists to improve pattern fidelity** [12957-61]
- 12957 1S **Identifying trends in photoresist polymer properties to improve line and space defects** [12957-64]
- 12957 1T **Understanding and improving performance of 14-nm HP EUV lithography via rational design of materials** [12957-65]
- 12957 1X **Sensitivity improvement of fluoroalkylated EUV resist with electron-rich vinyl units** [12957-70]
- 12957 1Z **Impact of increasing EUV absorption of CAR polymers on lithographic performance** [12957-72]
- 12957 20 **Enhancing process stability and defect control in advanced EUV lithography via innovative track systems** [12957-74]
- 12957 21 **Wet etch process for high-resolution DSA patterning for advanced node DRAM** [12957-75]
- 12957 23 **Application of higher absorption materials to the underlayer of EUV lithography** [12957-77]
- 12957 25 **Filter start-up study on HDPE membrane point-of-use filter for lithography application** [12957-82]

- 12957 26 **High- and low-refractive-index materials with high transmission for next-generation optical devices** [12957-83]
- 12957 28 **Characterization of nylon membranes for nano-particle filtration** [12957-85]
- 12957 29 **Next generation ultra clean nylon filter for on-wafer defects reduction enhancement** [12957-31]
- 12957 2B **Disruptive non-fluorinated photoacid generators using computational chemistry and library design** [12957-112]
- 12957 2E **Filtration study with nylon membrane for metal removal performance improvement** [12957-109]
- 12957 2F **Study on resist performance of inorganic-organic resist materials for EUV and EB lithography** [12957-110]

DIGITAL POSTER SESSION

- 12957 2G **Light-curable underlayers for non-baking process in EUV lithography** [12957-79]
