*Sponsored and Published by*  
SPIE

**Volume 13035**

Proceedings of SPIE 0277-786X, V. 13035

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Synthetic Data for Artificial Intelligence and Machine Learning: Tools, Techniques, and Applications II*, edited by Kimberly E. Manser, Christopher L. Howell, Raghuvveer M. Rao, Celso De Melo, Proc. of SPIE 13035, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510673885

ISBN: 9781510673892 (electronic)

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

vii *Conference Committee*

---

## VIRTUAL ASSET CREATION

---

13035 03 **Generating synthetic data for data-driven solutions via a digital twin for condition monitoring in machine tools** [13035-2]

13035 06 **Wicker scale model lab (WSML): rapid generation of ATR training data from 2 years to 3 days** [13035-5]

---

## SYNTHETIC DATA GENERATION TOOLS I

---

13035 07 **A unified infrared and radio frequency simulation environment** [13035-6]

13035 08 **Generating simulated data with a large language model** [13035-8]

13035 09 **Combining simulated data, foundation models, and few real samples for training object detectors (Honorable Mention- Best Presentation Award)** [13035-9]

---

## SYNTHETIC DATA GENERATION TOOLS II

---

13035 0A **Whole sky image synthesis for annotated machine learning datasets** [13035-11]

13035 0B **Automatic detection and recognition of humans with YOLO-based deep learning using MuSES-generated EO/IR synthetic imagery** [13035-12]

---

## POSE AND GESTURE RECOGNITION

---

13035 0D **Synthetic-to-real adaptation for complex action recognition in surveillance applications** [13035-14]

13035 0E **Multi-modal knowledge distillation for domain-adaptive action recognition** [13035-15]

- 13035 0F **An evaluation of large pre-trained models for gesture recognition using synthetic videos** [13035-16]
- 13035 0G **Synthetic datasets for microwave dish mensuration via pose estimation in deep learning models** [13035-17]

---

#### UNMANNED SYSTEMS

---

- 13035 0I **Real-time human action recognition from aerial videos using autozoom and synthetic data** [13035-19]
- 13035 0J **Generating medium-scale synthetic snowy scenes for testing autonomous vehicle navigation** [13035-20]
- 13035 0K **Improved 2D image segmentation for rough terrain navigation using synthetic data** [13035-21]

---

#### GENERATIVE MODELS

---

- 13035 0L **Method for training deep neural networks in vehicle detection using drone-captured data and background synthesis** [13035-23]
- 13035 0M **Weed image augmentation by ControlNet-added stable diffusion (Honorable Mention- Best Presentation Award)** [13035-25]
- 13035 0N **Generative EO/IR multi-scale vision transformer for improved object detection (Best Presentation Award)** [13035-59]
- 13035 0O **Enhancing human action recognition with GAN-based data augmentation** [13035-57]

---

#### MULTI-DOMAIN OPERATIONS

---

- 13035 0P **Coupled dynamical systems data for testing detection of subtle causal dependencies** [13035-26]
- 13035 0Q **Range estimation using machine-learned algorithms for passive sensors** [13035-27]
- 13035 0R **Fundamental epistemic error in computational military simulation** [13035-28]
- 13035 0S **Towards 3D scene reconstruction using Wi-Fi** [13035-29]

---

## INTEGRATED MACHINE LEARNING AND SYNTHESIS PIPELINES

---

- 13035 0U     **Task-oriented synthetic-to-real image translation for data-efficient learning** [13035-32]
- 13035 0V     **MizSIM: a headless open-source simulation framework for training and evaluating artificial intelligence** [13035-31]

---

## FIDELITY AND SENSITIVITY ANALYSIS I

---

- 13035 0W     **Toward quantifying the real-versus-synthetic imagery training data reality gap: analysis and practical applications (Invited Paper)** [13035-61]
- 13035 0X     **Integration of synthetic data into real world computer vision pipelines** [13035-33]
- 13035 0Y     **Synthetic augmentation methods for object detection in infrared overhead imagery** [13035-34]
- 13035 0Z     **Mind the (domain) gap: metrics for the differences in synthetic and real data distributions** [13035-35]

---

## FIDELITY AND SENSITIVITY ANALYSIS II

---

- 13035 10     **ODUSI: object detection using synthetic imagery** [13035-39]
- 13035 11     **Improving object detector training on synthetic data by starting with a strong baseline methodology** [13035-40]
- 13035 12     **Simulation fidelity analysis using deep neural networks** [13035-41]
- 13035 13     **Evaluating the influence of simulation fidelity in infrared sensor modeling on machine learning performance using explainable AI** [13035-42]

---

## FIDELITY AND SENSITIVITY ANALYSIS III

---

- 13035 14     **Mixing synthetic and real data to build AI vision models** [13035-43]
- 13035 15     **Fast rendering for radiometrically correct clouds** [13035-37]
- 13035 16     **Demonstration of the feasibility of using synthetically generated condensed water vapor plume imagery to train an AI model to automatically segment real imagery** [13035-38]
- 13035 17     **Automatic satellite characterization using simulated ISAR data** [13035-36]

## POSTER SESSION

---

- 13035 18     **Leveraging synthetic data for star and satellite photometry** [13035-44]
- 13035 19     **A new simulation platform for learning-empowered distributed sensing** [13035-45]
- 13035 1A     **Evaluation of synthetic Raman spectra for use in virus detection (Best Poster Award)** [13035-46]
- 13035 1B     **Utilizing terrain-generation to derive realistic channel models for automatic modulation recognition** [13035-47]
- 13035 1C     **Data augmentation and synthesis of radar signatures for ML-based gesture recognition and activity detection from MoCap trajectories** [13035-48]
- 13035 1D     **Overcoming the pain point in synthetic data generation: 3D remeshing and automated CAD repair with topological data analysis (TDA) indicators** [13035-49]
- 13035 1E     **Replicant framework for synthetic data generation** [13035-50]
- 13035 1F     **Synthesizing textured 3D meshes from pose invariant 2D image representations for optimal face recognition** [13035-51]
