TABLE OF CONTENTS

Artificial Intelligence-Driven Visual Inspection of civil infrastructure

<i>LLM-informed drone control for visual inspection of infrastructure</i>	1
<i>Accurate Rail Track Detection From High-Resolution Photogrammetric Flights: Photogrammetry, Computer Vision, and AI</i>	11
<i>Accurate Detection of Road Markings From High-Resolution Photogrammetric Flights: Photogrammetry, Computer Vision, and AI</i>	21

BIM and Engineering Ontologies

<i>Digital Rules in Infrastructure Planning: Presentation of an Ontology- Based Approach</i>	31
<i>Ontology-driven Comprehensive BIM Maturity Assessment Framework</i>	41
<i>Extension of accessibility ontologies by requirements for inclusive indoor navigation</i>	54
<i>Evaluating Topological and Geometric Requirements for Enhanced Spatial Data Management: Review and Proposals within the Context of Level of Information Need</i>	64

Requirements in information modeling

<i>Towards a comprehensive digital twin of a road infrastructure system – Requirements analysis and System architecture</i>	74
<i>Enhancing Information Requirement Compliance Through Automated Integration in a Modelling Environment</i>	84
<i>Developing Formal Representations of Building Regulations through a Parallel Drafting Process</i>	94
<i>Toward Occupant-Centric Virtual Agents: Office Workers' Perspectives on Technological Design and Implementation</i>	104

City and building simulation frameworks for Digital Twins

<i>A systematic review of generating the common data environment for city-level digital twins</i>	115
<i>Performance Modeling of Discharging Process in a Thermochemical Fluid System Using Machine Learning Approaches</i>	125
<i>Solar potential and RES evaluation into UniTO's digital Asset Management System for Sustainable Campus Development</i>	136
<i>Flow Field Prediction with Various Air Inlet Positions Based on Convolutional Neural Network</i>	146

Engineering Applications for Structural Health Monitoring

<i>An Ensemble Graph Neural Network-Based Framework for Localizing Damaged Elements Using Modal Data</i>	156
<i>Corrosion SAM: Adapting Segment Anything Model with Parameter-Efficient Fine-Tuning for Structural Corrosion Inspection</i>	166
<i>SAM-based Structural Surface Damage Detection</i>	176
<i>Early detection of local failures of steel truss bridges combining numerical modelling, Machine Learning and Operational Modal Analysis</i>	186

Engineering Applications to support the design, control and decision making of built environment	
<i>Narrow Concrete Crack Repair with Bio-Concrete and AI Based on Jetson Nano</i>	196
<i>Semantic Web-Based Risk Management System for Enhanced Construction Quality</i>	206
<i>Development of an Immersive Asset Control Room with Real-time IoT Sensor Data Visualisation</i>	216
<i>A Modular Approach to IoT Data Acquisition for increased Resilience in Critical Infrastructure - System Architecture</i>	226
Engineering Applications for Structural Health Monitoring	
<i>Assessment of the Bearing Capacity of Double Shear-Bolted Connections in Structural Steel using Machine Learning Interpretability Techniques</i>	235
<i>Structural health assessment for historical buildings based on HBIM and FE updating</i>	245
<i>New structural stabilisation systems to prevent building progressive collapse</i>	256
<i>Graph Embeddings-based Link Prediction for Bridge Maintenance Knowledge</i>	264
Towards the automation of construction processes	
<i>Real-Time Strategy in Construction Scheduling: a game-based interactive tool integrating BIM, Unreal Engine, and simulation methods.</i>	274
<i>Dynamic Mapping of Construction sites using SPOT based point cloud data</i>	284
<i>Automatic Operational Decision-Making on Construction Sites using Choosing by Advantages and Situational Awareness</i>	295
<i>Agent-Based Simulation Modeling for Construction Processes-A step toward Digital Twins</i>	305
New computing paradigms and robotics to assisting construction processes	
<i>Cloud and edge computing to enable map overlays for the digitalization of construction sites</i>	315
<i>Coordinating robotized construction using advanced robotic simulation: The case of collaborative brick wall assembly</i>	325
<i>Towards Automatic Semantic Capability-Matching for On-site Construction Machinery</i>	335
<i>Evaluating Viewpoint Control Techniques in Virtual Reality Interface for Teleoperating Construction Welding Robots</i>	345
Engineering Applications for monitoring and prediction of energy consumption	
<i>A BIM-based approach towards personalized thermal comfort monitoring using digital twins</i>	355
<i>Mitigating the Building Energy Performance Gap: potential of Digital Twins and Evidence-Based Policies</i>	365
<i>A Framework for Creating Georeferenced As-Is-Models from 2D Railway Signaling Plans using Object Recognition</i>	375
<i>Transfer Learning Modeling for Building Energy Performance Prediction Using Measured Data and Simulation Information</i>	385

Artificial intelligence in BIM and Infrastructure Modeling	
<i>Advancing Scan2BIM Automation: Metaheuristic Optimization in 3D Modeling of Bridges</i>	393
<i>Towards a copilot in BIM authoring tool using a large language model based agent for intelligent human-machine interaction</i>	403
<i>Towards commands recommender system in BIM authoring tool using Transformers</i>	413
<i>BIMCaP: BIM-based AI-supported LiDAR-Camera Pose Refinement</i>	423
Engineering Applications for Infrastructure safety	
<i>Applying Reinforcement Learning for Design Decisions on Fire Safety Requirements in a Fire Evacuation Environment</i>	433
<i>Application of open-source Large Language Models and Visual Language Models to evaluate roadside infrastructure within a road safety analysis framework</i>	443
<i>Hapti-met: A Construction Helmet with Directional Haptic Feedback for Roadway Worker Safety</i>	453
<i>On the role of microscopic traffic simulators in road-safety-centred Digital Twins</i>	463
3D Reconstruction and Environmental Analysis in Civil Infrastructure	
<i>Deep Learning-Based Segmentation and 3D Reconstruction for Heterogeneous Mixed-Use Building Layouts</i>	473
<i>Metaverse in AECO Industry: An Online Survey</i>	483
<i>Universal decision-making system for life cycle maintenance of bridge based on deep reinforcement learning</i>	493
<i>Optimizing Digital Information Delivery Process for Operation and Maintenance: An Advanced Business Process Modeling Approach</i>	503
Advanced computing in Engineering 1	
<i>Interpretable Reduced Data Modeling of Concrete Mix Behavior</i>	513
<i>A Conceptual Pipeline for Generating Synthetic Datasets Targeting VQA for Indoor Scenes</i>	524
<i>A computational simulation framework for probabilistic vulnerability analysis of the built environment</i>	534
<i>Graph Neural Network for Vulnerability Assessment in Urban Infrastructures without labeled data: A Case Study of Power Outage Impact on EV Charging Network</i>	544
Advanced computing in Engineering 2	
<i>Impact of Design Sequence on Building Design with Generative Methods</i>	559
<i>Enhancing Building Safety Design for Active Shooter Incidents: Exploration of Building Exit Parameters using Reinforcement Learning-Based Simulations</i>	569
<i>Transfer-Learning-Based Prediction of Heating Energy Consumption Using Urban Building Energy Models (UBEM)</i>	580
<i>On Component Commonality in Prefabricated Building Design</i>	590
Advanced computing in Engineering 3	

<i>Land use classification machine learning model using EuroSAT satellite imagery dataset</i>	600
<i>Analyzing the impact of environmental definition in synthetic data generation for image detection in a road setting</i>	609
<i>Trajectory extraction for vehicles and VRUs in urban scenarios from open-data traffic cameras</i>	618
<i>Real-time vehicle 3D positioning and velocity estimation through monocular camera on UAV</i>	628
<i>CROPMERGE: a method for cropping and merging point clouds to facilitate semantic and instance segmentation</i>	637

Emerging Computing Demands

<i>FMUGym: An Interface for Reinforcement Learning-based Control of Functional Mock-up Units</i>	647
<i>Decoupling an IFC Model Before Making Modification</i>	657
<i>VoxRasterLAS: A Python library for fast voxelisation and rasterisation of LAS 3D point clouds using GPUs</i>	667
<i>Advancing Sustainability in Civil Infrastructure through Semantic Segmentation of Road Surface Using 3D Point Cloud Data</i>	677
