Volume 13111

Proceedings of SPIE 0277-786X, V. 13111

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Plasmonics: Design, Materials, Fabrication, Characterization, and Applications XXII*, edited by Takuo Tanaka, Yu-Jung Lu, Proc. of SPIE 13111, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

PLASMONIC MATERIALS AND NANOSTRUCTURES I

13111 02 **Tunable electro-optic resonant metasurfaces (Invited Paper)** [13111-14]

PLASMONIC APPLICATIONS I

13111 03 **Metasurface perfect absorbers for light control: beyond visible and infrared emitters (Invited Paper)** [13111-23]

FUNDAMENTAL OF PLASMONICS II

13111 04 **Emission modification of Sm³⁺ doped glass due to plasmon effect** [13111-17]

METASURFACES IV

13111 05 **Metasurface-based depth sensing and topology optimized high-Q metasurfaces (Invited Paper)** [13111-33]

PLASMONIC MATERIALS AND NANOSTRUCTURES III

13111 06 **Plasmonic nano-disks arrays made with electron beam lithography using the dots-on-the-fly method** [13111-49]

METASURFACES VI

13111 07 **An unconventional take on plasmonic metasurfaces (Invited Paper)** [13111-55]

PLASMONIC MATERIALS AND NANOSTRUCTURES V

13111 08 **Self-organization via 3D printing of anisotropic plasmonic structures** [13111-65]

13111 09 **Plasmon effect provides emission stabilization of glass matrices under high temperature** [13111-66]

POSTER SESSION

- 13111 0A **Methodology for robust process window discovery in plasmonic nanostructures** [13111-72]
- 13111 0B **High-efficiency plasmonic filter-based microlens array for multispectral infrared sensor**
[13111-74]
- 13111 0C **Effects of defocusing on near-field intensity enhancement** [13111-76]
