**Volume 13248**

Proceedings of SPIE 0277-786X, V. 13248

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Fourth Optics Frontier Conference (OFS 2024)*, edited by Qiwen Zhan, Proc. of SPIE 13248, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

## FOURTH OPTICS FRONTIER CONFERENCE (OFS 2024)

---

- 13248 02 **Research on high-repetition-frequency and high-power nanosecond laser cleaning technology** [13248-3]
- 13248 03 **3D topography and roughness measurement of the inner surface of semi-closed parts** [13248-4]
- 13248 04 **1.5- $\mu\text{m}$  pulsed semiconductor lasers for LiDAR applications** [13248-5]
- 13248 05 **Femtosecond laser inscription of FBGs in ytterbium-doped fiber based on fluorescence detection techniques** [13248-7]
- 13248 06 **Conformal assembly of cellulose nanocrystals with micro-nano structures for structural color** [13248-8]
- 13248 07 **Study on hot electron photoconversion in individual embedded gold/silicon nanohole** [13248-10]
- 13248 08 **Comparative study of photoconductive and diode  $\text{MoS}_2/\text{MoTe}_2$  heterojunction infrared photodetectors** [13248-11]
- 13248 09 **Study on infrared photodetectors based on black phosphorus** [13248-12]
- 13248 0A **Study on enzyme-free glucose sensor based on Au and CuO co-modified  $\text{TiO}_2$  films for photoelectrochemical detection** [13248-14]
- 13248 0B **Measuring shape and position change of micro targets based on speckle correlation and polarization** [13248-15]
- 13248 0C **Microfluidic refractive index sensor based on concave reflection grating** [13248-17]
- 13248 0D **Coded optical time domain reflectometer system based on orthogonal frequency division multiplexing technology** [13248-21]
- 13248 0E **Enhanced emission from interlayer excitons coupled to silicon nanodisk array** [13248-22]
- 13248 0F **Suppressing phase segregation via trifluoromethanesulfonic acid enables efficient wide-bandgap perovskite solar cells** [13248-25]
- 13248 0G **High-power wideband low-polarization semiconductor optical amplifier for 1.5 $\mu\text{m}$  band** [13248-26]
- 13248 0H **Enhancement in light absorption of InAs-thin-film photodetectors with metal nanowire grating** [13248-27]
- 13248 0I **Study on the improvement of photoelectric conversion efficiency of solar cells by gold nano double-cone particles** [13248-28]

- 13248 OJ **Fabrication of large-scale monocrystalline silicon metasurfaces on flexible substrates** [13248-29]
- 13248 OK **Enhanced photoluminescence at the edges of light-emitting metasurfaces induced by guided modes** [13248-31]
- 13248 OL **Graphene/silicon infrared photoelectric detection based on black phosphorus modification** [13248-32]
- 13248 OM **Microwave photonics instantaneous frequency measurement scheme assisted by machine learning method** [13248-33]
- 13248 ON **Non-volatile optical waveguide switch based on electro-thermic chalcogenide phase change material** [13248-34]
- 13248 OO **Novel SOI edge coupler design based on cantilever structure** [13248-35]
- 13248 OP **Phase noise suppression method based on SVM-D-PCC in phase-sensitive optical time domain reflectometer** [13248-36]
- 13248 OQ **Q-switched mode-locked 2- $\mu\text{m}$  laser based on graphene oxide saturable absorber** [13248-38]
- 13248 OR **Low-cost contact-free screen control based on machine vision** [13248-40]
- 13248 OS **FP semiconductor lasers based on lateral mode modulation** [13248-41]
- 13248 OT **Phase unwrapping noise suppression method based on BEAST-SPA in distributed acoustic sensing system** [13248-44]
- 13248 OU **Establishment of data-domain sharing database for generative artificial intelligence-based photoacoustic tomography** [13248-46]
